Pulsetech Products - Driven to provide vehicle and equipment sustainability solutions; is proud to announce the availability of yet another valuable battery maintenance product - the NEW SP-25 !

The growing popularity of the recently introduced Xtreme Charge battery maintenance and charging products combined with our ever popular and virtually indestructible Solar battery maintenance products has brought about the all new SP-25 **Solar Battery Maintenance Charger!**

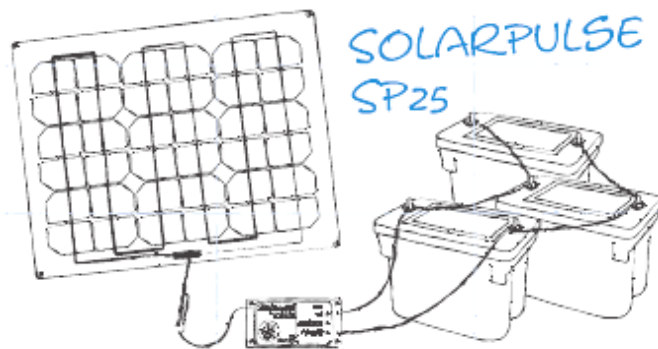

Use the power of the sun to decrease battery based fleet vulnerability caused by ever growing parasitic electrical loads and vehicle inactivity; all while conditioning, charging and maintaining the heart of your vehicle or equipment – the battery(s).

Rated at 1.6 amps, the 25-Watt SolarPulse® charges, maintains and de-sulfates all types of 12-volt lead acid batteries including Standard, AGM and Gel types. The SP25 is designed to work with up to four batteries connected in parallel. The unit is ideal for virtually any kind of vehicle and equipment, including emergency vehicles, tractors, prime movers, generators, oil and gas field and construction equipment, boats and much more.

Break past ties with AC wall powered charging products and extension cords. Connect it and forget it - When mounted on any vehicle or equipment, the SP25 is a totally autonomous and entirely automatic battery conditioning and charge/maintenance system. Anytime the sun is shining it is working for you. The New SP-25 uses a powerful 1–2 Punch provided by the combination of our exclusive microprocessor controlled charge algorithms and high frequency Pulse technology, extending battery performance and useful life by up to five times.

Batteries are expensive and down-time can be even more costly. Sell or install the NEW SP-25 to charge, condition, and maintain your vehicle fleet and equipment batteries.

A virtually indestructible industrial design, the SP25 features a polyurethane encapsulated solar panel mounted on a solid aluminum back plate. The SP-25 solar panel is water and weatherproof while offering flexible mounting options; LED indicators provide easy-to-understand status functions.

GET YOURS TODAY – YOU WILL BE GLAD YOU DID!
